

Open Source Practice

Group 86

Project title -

Message board

High-level functionalities -

1. Creating a user profile
2. Login & logout feature
3. Grant admin privileges
4. Creating a forum as an admin user
5. Accessing forums and uploading posts
6. Commenting on posts, and *other comments*

Two example scenarios -

Scenario 1 ~

Users: Day to day internet user

Activity: User wants to create a new account

Process: First-time user enters the website and needs to create an account. Account creation requires their *email*, *username* and a *password*. After completing the registration process, users will be directed to the login page.

Operations: When the user has created the account, a POST function will be triggered; storing user email, username and password in the database (email and username must be unique). A user ID will be assigned to each user profile automatically.

Scenario 2 ~

Users: Admins

Activity: Admin wants to create a forum

Process: Admin selects “create forum” option, enters a title and description (optionally an image/icon).

Operations: Add entry to the forum table
