Architecture ->

The webserver of the app is hosted on raspberry pi Zero 2 W running apache2.
The database is also hosted on the same raspberry pi.

Modules ->

Split into 3: Doc, Module & Src

Doc ~ This folder store additional
documentation about the App

Modules ->

Module ~ It stores all php files except php files that creates a page, as well as the sql code to create the table for the database. It includes SQL_on_PHP and sql_code folder.

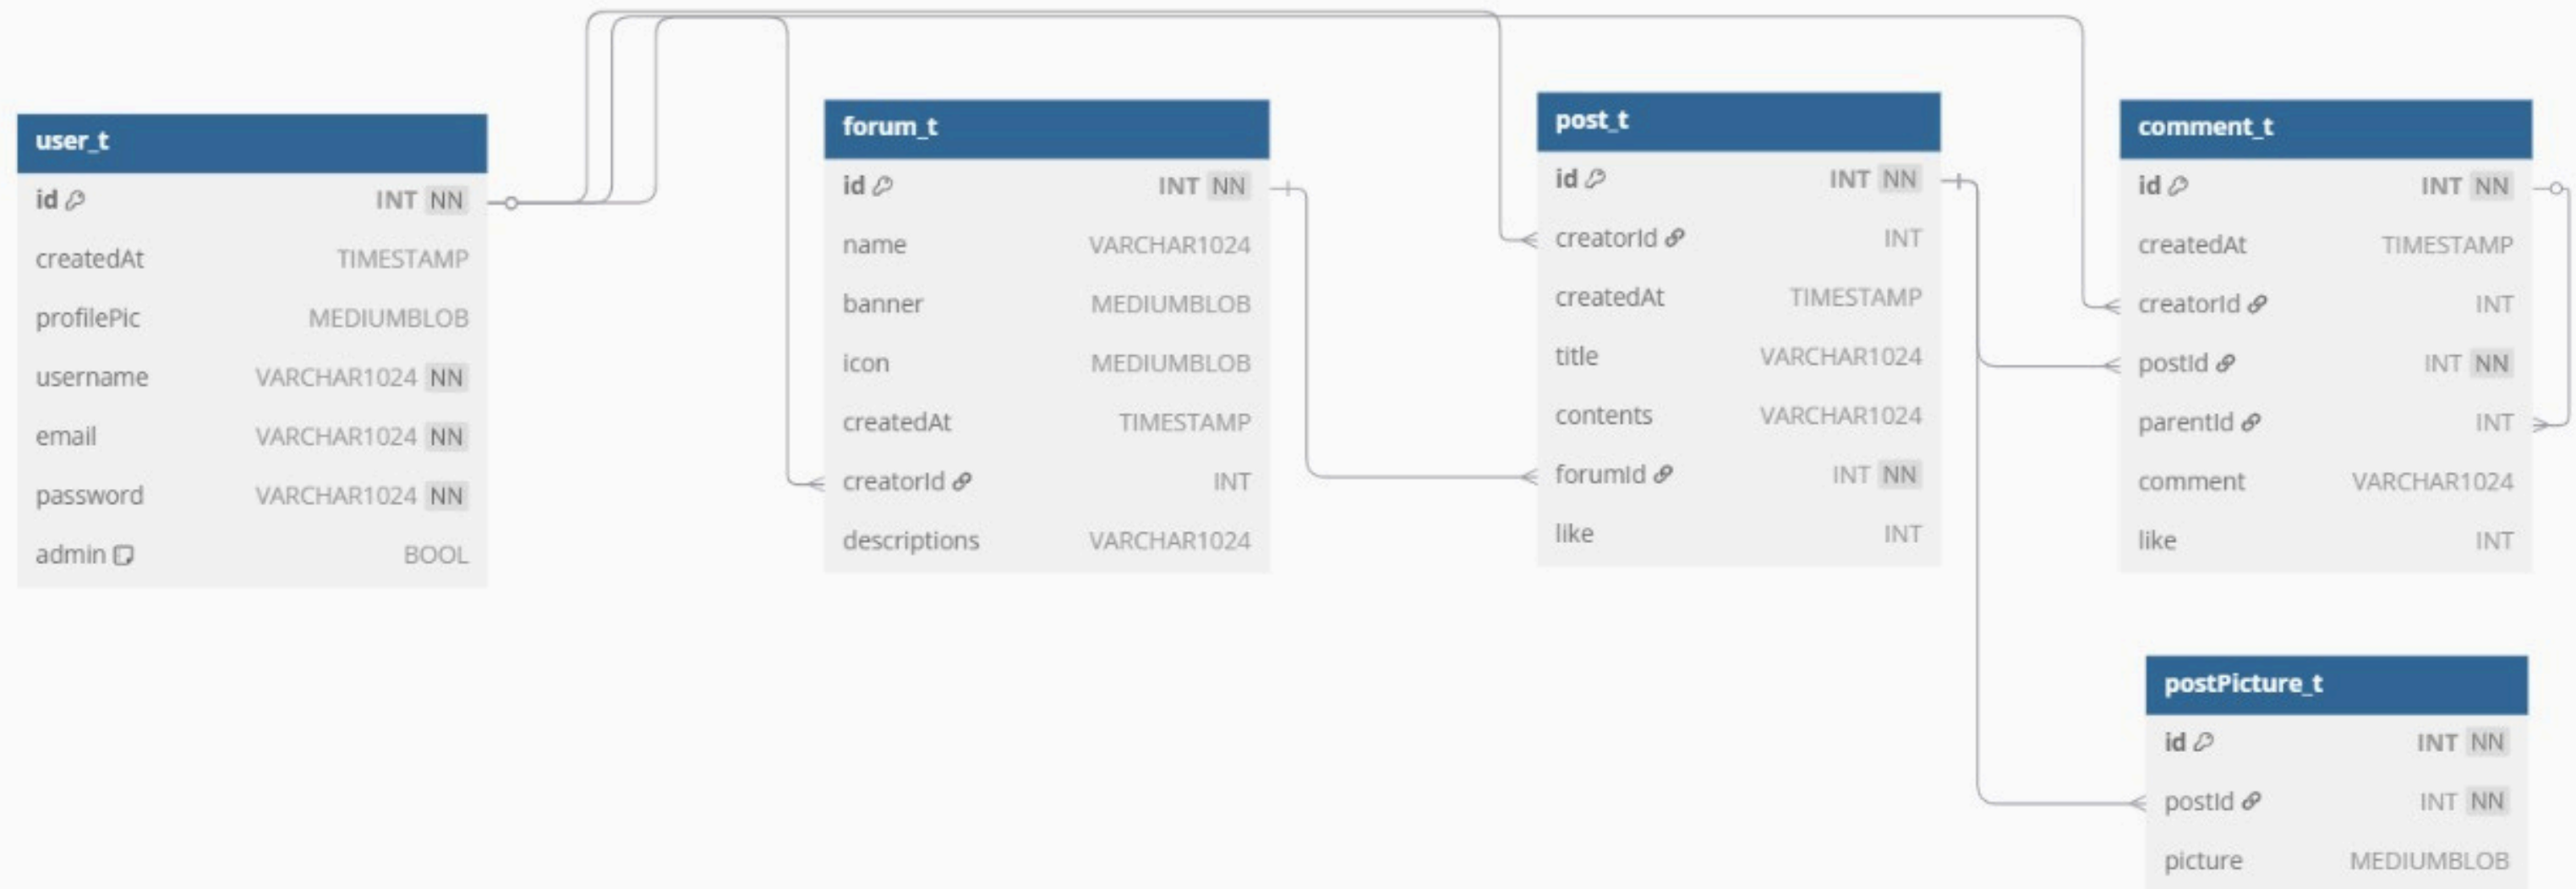

- a. SQL_on_PHP. This folder stores all listener files, HEADER.php, and the debug folder.
 - i. Listener files are php files that provide all functionality needed to respond to web page requests. Beside GENERAL_LISTENER.php which store common functionality, each listener page corresponds to a single page/popup.
 - ii. HEADER.php acts as a library for other php files. The user_defaultProfile.jpg is used for the default profile picture, databaseConfig.json can be modified such that another image is used instead as the profilePicture.
 - iii. Debug folder provides functionality for creating dummy entries or truncating the table. This folder can be deleted
- b. sql_code. Stores a single sql file that stores the code to produce the relation table.

Modules ->

Src ~

- Assets. This stores the picture that are used to create the page, note that user_profilePic is inside the /Module/SQL_on_PHP
- Components. This folder store all javascript files. The *_js.js file is redundant since the javascript code is already inside the html file.
- Css. This folder store css files
- Php. Stores php file that corresponds to each html file in /src/views. When the browser request a page, this file is requested instead of the html version. This file will do preprocessing by replacing predefined variable inside the html file with data queried from the database.
- Views. Stores the html file for each popup/page. Each file in here has a corresponding php file in the php folder that is called instead when the browser opens a page. The php file does preprocessing by replacing predefined variable inside the html file with data queried from the database.

Schema ->

Website Demonstration

In the next few slides, we will be demonstrating features from our website "LetMeKnow" that are fully operational

An **extra** note

Our website is equipped with automatic login redirecting, users that have not logged into an account will be redirected to the login page before being able to make a post

Presidents around the world

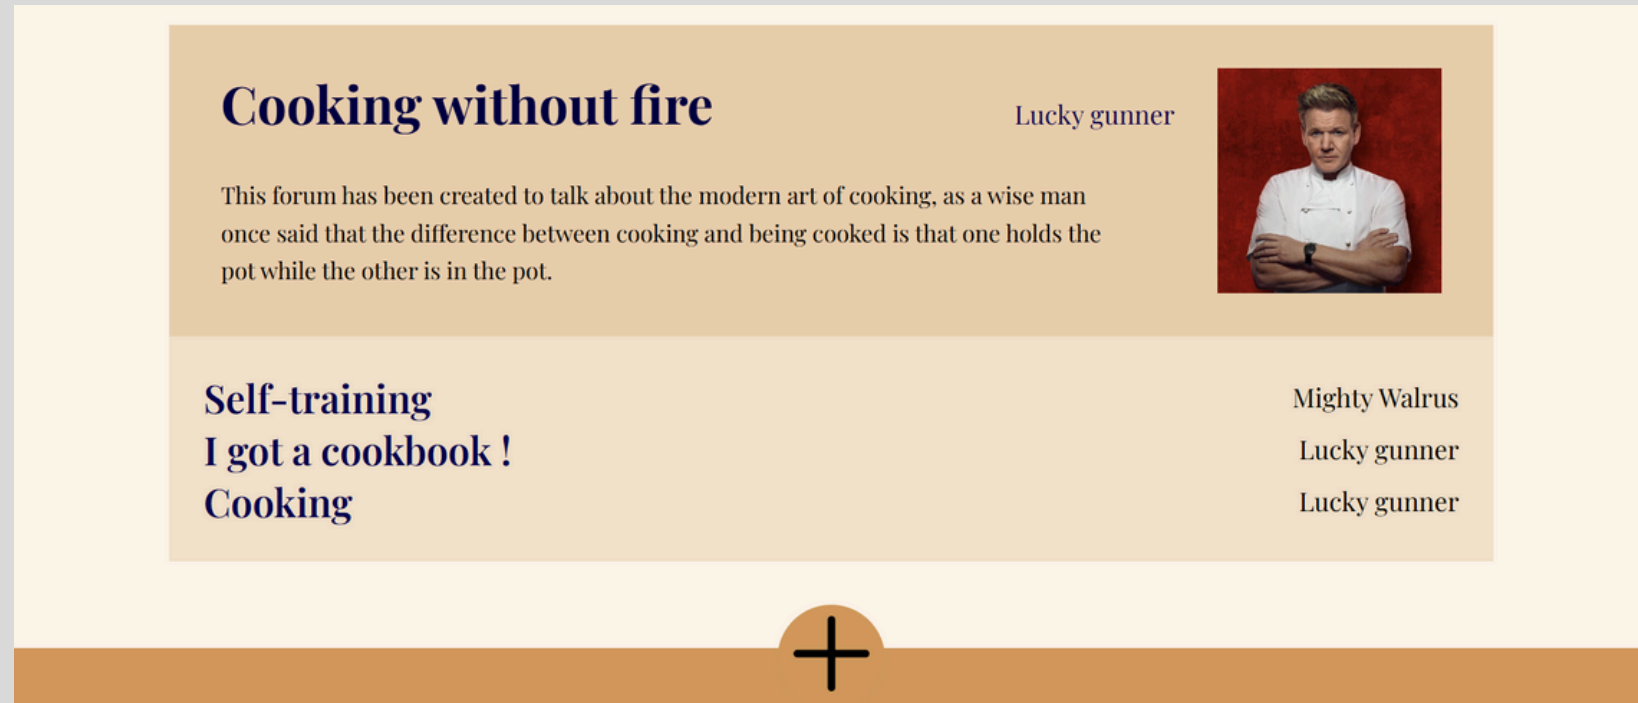

Lucky gunner

The global political scene is ever-changing and unpredictably dynamic, in this forum we will respect the right to freedom of speech and be a safe space for opinions.

Profile picture can be added after logging in

Creating a forum

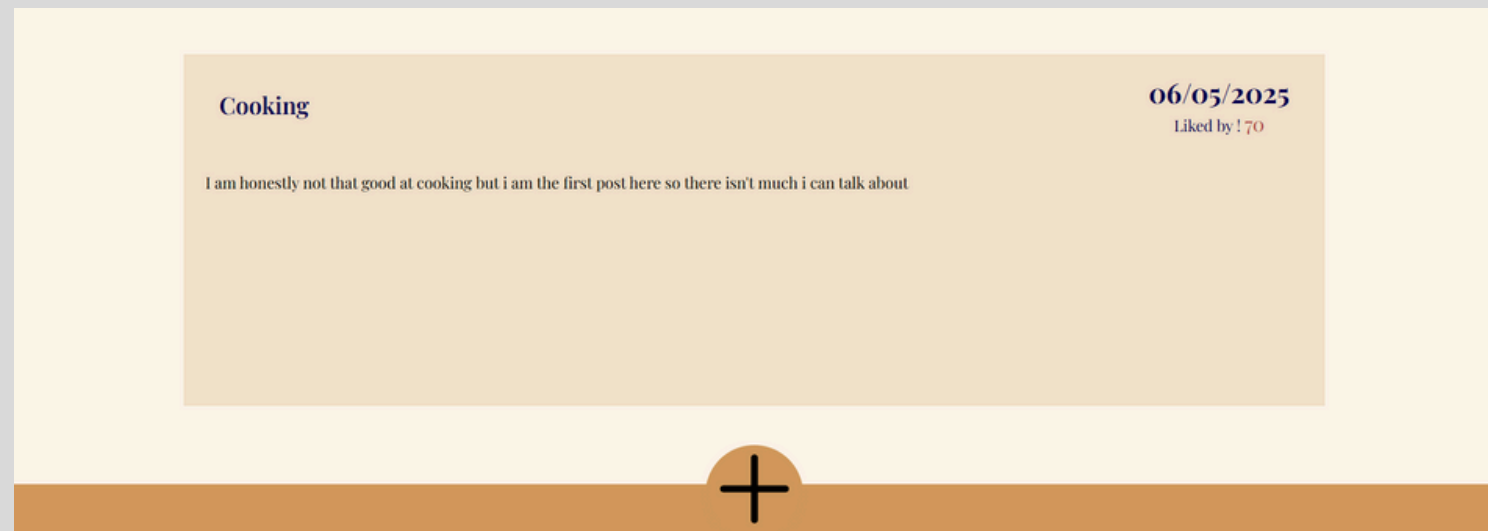

1 ~ Click the + button at the bottom of homepage

A screenshot of a forum creation page titled "LetMeKnow" in a bold, dark blue, italicized serif font. The page has a light cream background. At the top, there is an orange header bar containing a red double-left arrow icon, the forum name, and a small square image of an elephant. The main content area has two sections. The "Title" section has a label in a dark blue serif font and a light orange rounded rectangular input field with the placeholder text "Enter forum title...". To the right of this field are two stacked orange rounded rectangular buttons, each with a white "Choose File" label. The "Description" section has a label in a dark blue serif font and a large light orange rounded rectangular text area with the placeholder text "Write a short description...". At the bottom right of the page is an orange rounded rectangular button with the word "Post" in a bold, italicized, dark blue serif font.

2 ~ Fill in forum information and choose forum banner/icon, then click "post"

Creating a Post

1 ~ Click the + button at the bottom of forum page

A screenshot of the 'LetMeKnow' post creation form. The form has an orange header with the 'LetMeKnow' logo and a back arrow. The form fields include: a 'Title' field with a placeholder 'Enter post title...' and a 'Choose File' button with a red 'N...' icon; a 'Description' field with a placeholder 'Write a short description...'; and a 'Post' button at the bottom right.

2 ~ Fill in post title and description, add an optional image, then click "post"

Commenting

1 ~ Click the + button at the bottom of each post page

2 ~ Write a comment and press the "comment" button
